

STEM Education

Along with the Abeka curriculum we currently use, our preschool has also integrated a new style of learning called STEM.

STEM stands for science, technology, engineering, and mathematics. STEM is important because it is a part of our everyday lives.

STEM is a curriculum based on the idea of educating students in four specific disciplines — science, technology, engineering and mathematics — in an interdisciplinary and applied approach that uses logic to problem solve.

STEM requires students to answer open ended questions and to conclude solutions on their own or in a group.

We believe it is important for our youth to be equipped with the knowledge and skills to solve problems, gather and assess evidence, and make sense of information. These are the types of skills that students learn through STEM education.

Our Pre-K teachers will be introducing STEM to your children and will be teaching and conducting interactive STEM lessons and experiments with the children throughout the school year.
